

BEST **NON-INVASIVE SKIN TIGHTENING** TREATMENT

RF Face + Eyes *Vedure*

Ideal for reducing wrinkles and tightening the skin, achieve desirable and long-lasting results with Vedure's needleless radiofrequency facial treatment—RF Face + Eyes. This treatment uses radiofrequency technology featuring deep tissue heating generated by a state-of-the-art machine to gently warm the tissues deep beneath the facial skin and encourage inner rejuvenation. On the skin surface, saggy skin is lifted and rejuvenated. Deep down, the production of collagen and elastin is boosted. The machine is also completely safe to use on the sensitive eye

area. When used on the eye areas, the heat gently improves the circulation in the blood vessels beneath the eyes. This is coupled with delicate lymphatic drainage steps to tackle common problems such as puffiness, fine lines and dark eye rings. After just one treatment, the eye contours appear lifted.

BAZAAR LOVES IT

Unlike corrective surgeries, this non-invasive treatment has no downtime or negative side-effects. Visible improvements can be promptly seen on the skin. Skin becomes smoother and tighter while troubling expression lines and wrinkles are softened.
